

Section 1: General Questions

1. What is the total number of deliveries, and what percentage were delayed?
 2. What is the average delivery cost and average delivery rating across all shipments?
 3. How are deliveries distributed across the different regions?
 4. What is the breakdown of deliveries by delivery status (e.g. delivered, failed, returned)?
 5. What is the average distance (km) and package weight (kg) across all shipments?
-

Section 2: Medium Questions

1. Does weather condition affect the likelihood of a delayed delivery?
2. Which delivery partner and vehicle type combination has the highest delay rate?
3. Is there a relationship between delivery mode and average delivery rating?
4. Do longer distances correlate with higher delivery costs and longer delivery times?
5. Which region has the highest gap between actual delivery time and expected delivery time?
